**M8-13B & M8-14B Weekly Status Report**  
**OPS Period: 5/23/2022 – 5/29/2022**

**Marty Asbestos Buildings M8-14B**

**Work Authorized by OSC During this Period**

- Secure buildings and prevent unauthorized entry.
  - Continued to control access to both St Kathrine and St Joseph building ensuring no one enters-into the buildings unless approved by the RM or Forman on site.
- Maintain Support, Contamination Reduction and Exclusion Zones.
  - Completed the exclusion zones to include all three building that will be torn down.
  - Set in place fencing with poly for exclusion zone with ACM warning signs
- Install structures to protect steam plant.
  - Based off the engineer's observance of the steam plant it is fully supported by its own roof and beam structures. No need for bracing of the roof inside the steam room.
  - Plywood sheathing has been placed on the roof of the steam plant to protect the roof from damage from falling bricks
- Finalize contingency plans for potential damage to steam plant.
  - Emergency actions are finalized with the tribal contacts and have phone numbers ready at hand if there is an emergency. We have located and identified power, and water shut off locations for the steam plant.
- Demolish white housing structure.
  - Completed demolition of white housing structure. All power, water and gas utilities were confirmed as turned off and disconnected prior to demolition
- Demolish St Joseph building.
  - Completed demolition of St. Joseph building. All power, water and gas utilities were confirmed as turned off and disconnected prior to demolition
- Maintain dust suppression.
  - Maintained water coverage on demo ensuring no visible dust was seen coming from the demo, conducted water spray down of piles throughout the weekend.
- Haul building debris to dump location if needed.
  - No building debris was hauled off during the reporting week, hauling will start on 06/01
- Fly UAS.
  - UAS was flown on 05/25 on both the demo and repos sites to document progress
