Sampling Investigation Report

Techtrix, Inc.

1.0 Introduction

The United States Environmental Protection Agency (US EPA) Region 4 Laboratory Services and Applied Science Division (LSASD) personnel conducted sampling at the Techtrix, Inc. in Gadsden, Alabama on March 23, 2021. Alan Newman, Environmental Engineer, Region 4 Enforcement and Compliance Assurance Division (ECAD) requested the sampling and pH and TCLP Metals analyses of the non-hazardous waste totes and unidentified tanks at the site.

Representatives of the LSASD conducted the requested waste and soil sampling investigation. The following personnel were present for all or a portion of the investigation:

NAME	ORGANIZATION	DUTIES
Paula Whiting	LSASD	Project Leader, Sampler
Art Masters	LSASD	Safety Officer, Sampler
Mike Neill	LSASD	Sampler
Kevin Simmons	LSASD	Scribe, Sampler
Alan Newman	ECAD	Project Manager, Inspector
Kayla Acosta	ECAD	Inspector
Corey Holmes	Alabama Dept. of Env. Mgmt.	Inspector

This sampling event was conducted in accordance with the Sampling and Analysis Plan (SAP) for the Techtrix, Inc. facility dated March 15, 2021. Any deviations from the SAP are documented in the field logbooks as needed and discussed in the appropriate sections of this report. In addition, the SAP is designed to be used in conjunction with the Applied Science Branch (ASB) Quality Assurance Project Plan December 2019.

2.0 Summary

During the Techtrix, Inc. sampling investigation, LSASD personnel collected a total of sixteen samples. Seven samples were collected from 275- or 325-gallon totes, six samples were from various sized tanks, one soil sample from the drainage ditch, one sample from outdoor containers and one sample from a cadmium plating line dip tank. LSASD's Laboratory Services Branch chemists analyzed the samples for pH, total metals and TCLP metals.

Laboratory analyses showed that fifteen of the sixteen samples collected from the totes, tanks, drainage ditch and plating line exhibited the toxicity characteristic (TC) for cadmium (D006), chromium (D007), lead (D008) and/or silver (D011). Cadmium toxicity characteristic leaching procedure (TCLP) results ranged from 18 mg/l to 4,300 mg/l for the seven samples which exceeded the cadmium TC regulatory level of 1.0 mg/l. For the twelve samples which exceeded the chromium TC regulatory level of 5.0 mg/l, chromium TCLP results ranged from 6.8 mg/l to 2,200 mg/l. Both lead and silver have a TC regulatory level of 5.0 mg/l and both had four samples

exceed it. Lead TCLP results ranged from 7.4 mg/l to 13 mg/l while silver TCLP results ranged from 5.4 mg/l to 74 mg/l.

Laboratory testing showed that three samples demonstrated the RCRA characteristic of corrosivity (D002) by having pH values of less than 2.0 Standard Units (SUs) or greater than 12.5 SUs. Sample T07 had a laboratory pH value of less than 1.0 SUs while samples T16 and TK02 had pH values of 12.71 and 12.95 SUs, respectively. (**Table 3**).

3.0 Site Background

Techtrix, Inc. located in Gadsden, Alabama, is an electroplating and metal finishing facility that has been in operation since 1987. The facility occupies 80,000 square feet and employs approximately six people. The facility operates seven plating lines and a wastewater treatment system. The wastewater treatment system is not hard piped to the plating tanks. When plating baths are determined to be spent, they are pumped into 250-gallon totes and moved to the wastewater treatment system. Techtrix, Inc. provides zinc, brite dip, chromate, Alodine, silver, and cadmium electroplating.

The Alabama Department of Environmental Management (ADEM) inspected the facility on February 21, 2021; January 14, 2019; September 21, 2015; and, December 7, 2011. As noted in the inspection reports, the ADEM inspector found areas that required waste determinations, and had container management issues and storage deficiencies which resulted in Notices of Violation and consequently enforcement actions incurring penalties. After the 2021 inspection, ADEM referred the facility to the US EPA for further investigation and sampling.

4.0 Field Investigation and Methodology

On March 22, 2021, the US EPA and ADEM conducted a compliance evaluation inspection (CEI) at Techtrix, Inc. and found multiple deficiencies including waste determinations, and hazardous waste container management and storage. At the time of the March 22, 2021 CEI, the US EPA and ADEM inspectors observed three hazardous waste accumulation storage areas with 275-gallon and 325-gallon waste totes stored over 90-days, two non-hazardous waste storage areas with totes filled with unidentified waste, an inactive wastewater treatment plant with eight unlabeled tanks containing abandoned waste material, three inactive cadmium plating line tanks with abandoned waste allowed to solidify and stored over 90-days, an inactive Alodine plating line leaking unidentified liquid on the concrete floor, multiple supersacks of hazardous waste floor sweeping removed from underneath the plating lines, five 2 X 2 containers removed from the process and stored outside with green dust residue releasing to the environment, a drainage ditch below the 2 X 2 container exterior storage, three rusted 55-gallon drums of unknown contents and discarded floor sweeping in a solid waste dumpster.

ECAD requested that LSASD sample the drainage ditch beside the exterior building wall, the 2 X 2 containers in the outside loading area, the three rusted drums of unidentified material, the accessible totes in the non-hazardous storage areas, the unlabeled tanks in the wastewater

treatment plant, the cadmium plating line tanks, and the unidentified liquid leaking on the floor behind the Alodine plating line.

LSASD personnel sampled the soil in the drainage ditch behind the main building, discarded containers behind the main building, seven totes, six standalone tanks and one plating tank during the investigation. Samples were collected from the drainage ditch beside the exterior building wall (S01), the discarded 2 X 2 containers stacked on a pallet next to the exterior building wall (WA01), seven 275- or 325-gallon totes (T06, T07, T13, T16, T17, T20 and T21), six standalone tanks (ET01, TK02, TK08, TK09, BBT, and GT), and a cadmium plating line dip tank (CP).

Field activities were conducted in accordance with LSASD's Field Branch's Management and Quality System Procedures and the following LSASD field sampling operating procedures:

LSASDPROC-300-R4 - Soil Sampling

LSASDPROC-302-R4 - Waste Sampling

Prior to sample collection, pH was screened using pH paper secured to a three-foot wooden dowel and dipped inside the tote and the reading recorded. As seen in the photos (Appendix A), the totes in the non-hazardous waste storage areas were stacked two-high. Twenty-four second-tier totes were screened for pH. A Mini-Rae 3000 photoionization detector (PID) was used to monitor any volatile organic compounds (VOCs) that may have been emitted from the contents of the totes. Seven of the twenty-four totes were selected to be sampled based on the pH and PID screening.

The wastewater treatment system (WWTS) tanks were already opened to the atmosphere. Four of the tanks contained liquid and two tanks contained sludge (multiphase semi-solid) material. The viscosity of the material did not allow for proper detection using pH paper.

All field measurement and sampling procedures were performed and/or overseen by LSASD Applied Science Branch (now named the Field Services Branch) personnel proficient in the pertinent procedures. Any person that was not proficient in any measurement or sampling procedure was teamed with someone who was proficient.

Chain of custody documents were prepared by Mr. Simmons using the US EPA's Scribe program. Samples were submitted to the LSASD laboratory for analyses. Split samples were collected by LSASD and received by the facility on March 24, 2021.

The three rusted drums of unidentified material were determined to contain only solidified asphalt in Drum 83, and 1/3 solidified asphalt and 2/3 liquid in Drum 84. The pH in both drums were neutral, thus no sample was taken, and no PID reading were observed. Drum 85 could not be opened, nor the contents examined due to the condition of the drum.

The Alodine plating line was not in service at the time of the inspection and investigation. The facility personnel stated that the line had been closed for an extended period due to leaking. At the time of the investigation, the sample team observed unknown liquid puddles on the floor behind the Alodine plating line. The sample team took three random pH screenings resulting in pH of 9-10. No samples were taken due to low volume of liquid on the floor and the near neutral pH.

Sample data collected during the investigation are presented in Tables 1 and 2. Photographs are in Appendix A.

5.0 Results and Discussion

Soil (S01) and waste samples (BBT, CP, ET01, GT, T06, T07, T13, T16, T17, T20, T21, TK02, TK08, TK09 and WA01) were analyzed for total metals using USEPA methods 6010C and USEPA 200.8. When total metal scan results showed that one of the TC constituents in a sample could possibly exceed its TC regulatory levels, the TCLP was performed for that sample. The TCLP was performed on all the samples except T13. Waste samples (BBT, ET01, T06, T07, T13, T16, T17, T20, T21, TK02, TK08, and TK09) were analyzed for pH using USEPA 9040.

Table 3 summarizes the RCRA TCLP Metals and pH Data Summary and **Table 4** contains the TCLP Metals Analyses Data for the waste samples while **Table 5** summarizes the Total Metals Analysis Data for the waste samples and **Table 6** summarizes the metal analyses for the soil sample. LSASD's complete analytical reports are included as **Appendix D**.

Laboratory analyses showed that fourteen of the sixteen samples collected from the totes, tanks, and plating line dip tank exhibited the toxicity characteristic for cadmium (D006), chromium (D007), lead (D008 and/or silver (D011). Additionally, soil sample (S01) exceeded TC regulatory limits for cadmium (D006) and lead (D008).

TCLP results for cadmium exceeded the TC regulatory level of 1.0 mg/l for seven samples. The cadmium TCLP results were: 4300 mg/l for sample BBT; 120 mg/l for sample CP; 110 mg/l for sample GT; 26 mg/l for sample S01; 75 mg/l for sample T07; 18 mg/l for sample TK08; and 510 mg/l for sample TK09. TCLP results for chromium exceeded the TC regulatory level of 5.0 mg/l for 12 samples. The chromium TCLP results were: 79 mg/l for sample BBT; 54 mg/l for sample ET01; 13 mg/l for sample GT; 39mg/l for sample T06; 2200 mg/l for sample T07; 11 mg/l for sample T16; 26 mg/l for sample T17; 33 mg/l for sample T20; 19 mg/l for sample T21; 6.8 mg/l for sample TK02; 24 mg/l for sample TK08 and 49 mg/l for sample WA01. TCLP results for lead and silver exceeded the TC regulatory level of 5.0 mg/l for four samples each. Samples S01, T06, T07 and T16 had lead TCLP results of 10 mg/l, 13 mg/l, 7.5 mg/l and 7.4 mg/l, respectively. Samples BBT, T06, T20 and T21 had silver TCLP results of 69 mg/l, 74 mg/l, 64 mg/l and 5.4 mg/l, respectively (**Table 3**).

As expected, metal analyses of the soil and waste samples collected from the drainage ditch, totes and tanks detected high concentrations of metals including zinc and nickel (**Table 4**). Laboratory analyses determined that three samples exhibited the RCRA characteristic of corrosivity (D002) by having pH values of less than 2.0 Standard Units (SUs) or greater than 12.5 SUs. Laboratory pH analysis of sample T07 measured an acidic pH of less than 1.0 SUs, while samples T16 and TK02 had basic pH of 12.7 SUs and 12.95 SUs, respectively (**Table 4**).

Spilt samples were provided to Mrs. Pamela Beavers, Techtrix, Inc. on March 24, 2021, at 7:45 AM.

Quality Control Sample Results

Blanks (Field and Equipment)

No field or equipment blanks were collected during this investigation.

Split Samples

Split samples were collected at each sample station and provided to the facility for shipment to and analysis at their contract laboratory. The copy of the signed Receipt for Samples is in **Appendix C**.

Laboratory Quality Control Samples

For the metal analyses, samples GT and T21 were designated as the LSASD's laboratory matrix spike/matrix spike duplicate (MS/MSD), and for the TCLP analyses, samples GT and TK08 were used as quality control samples. Samples T20, T21 and TK02 were used as duplicate samples for the pH testing quality control. Results of quality control analyses are contained in the LSASD's Laboratory Analytical Data Reports in **Appendix D** and are acceptable for the purposes of this investigation. Full definitions for the data qualifiers are provided in their respective reports. The reported results are accurate within the limits of the methods.

6.0 Conclusions

The analytical data from this investigation is associated with spent or discarded metal plating materials that have been stored beyond the large quantity generator requirements of less than 90 days. Both cadmium and chromium are major constituents in this facility's metal plating operations. All but one sample, T13, contained either cadmium, chromium, lead and/or silver at TCLP concentrations that are indicative of RCRA characteristic hazardous wastes. Three samples were shown to exhibit the corrosive characteristic for RCRA hazardous waste.

General Notes

Date: 3/23/21

Drums 83 and 84 - rusted drums filled w/ sooty/grey asphalt: Drum 83 contained only asphalt, Drum 84 contained asphalt and liquid (2/3). pH was neutral - no sample taken. No PID readings. Did not open Drum 85 - unstable.

Totes - ~~44~~^{pw} 3/23/21 Non HW totes w/ high pH of 12 or more will only have pH analysis, not metal analysis.

Narrowed down assessed totes to totes w/ pH 13 and 14 and pH 0-1, total totes = 7.

Aldoline Line backside - line closed due to leaking took 3 pH readings that resulted in pH 9-10. No samples will be taken due to low volume and near neutral pH.

Tank 2 has sand gray gorp that is 1/2 tank below top. NO pH or pid reading obtained.

Total Tanks Sampled

If applicable, samples preserved with ice:

Ice checked or purchased	By	Date	Time

Project: 21-0164, Techtrix, Inc. - Reported by Floyd Wellborn

April 13, 2021

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 21-0164, Techtrix, Inc.

FROM: Floyd Wellborn
LSB Inorganic Chemistry Section Chief

THRU: Sandra Aker, Chief
Laboratory Services Branch

TO: Paula Whiting

Attached are the final results for the analytical groups listed below. This report shall not be reproduced except in full without approval of the Region 4 laboratory. These analyses were performed in accordance with the Laboratory Services Branch's Laboratory Operations and Quality Assurance Manual (LSB LOQAM) found at www.epa.gov/region4/sesd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the LSB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Chapter 5 of the LSB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Sample Disposal Policy

Due to limited space for long term sample storage, LSB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at R4SampleCustody@epa.gov.

DATA QUALIFIER DEFINITIONS

ACRONYMS AND ABBREVIATIONS

CAS Chemical Abstracts Service

Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.

MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.

MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.

TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

ACCREDITATIONS:

ISO Accredited to ISO/IEC 17025:2017 and accreditation requirements for Forensic Science Testing Laboratories.

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 21-0164, Techtrix, Inc.

FROM: Floyd Wellborn
LSB Inorganic Chemistry Section Chief

THRU: Sandra Aker, Chief
Laboratory Services Branch

TO: Paula Whiting

Attached are the final results for the analytical groups listed below. This report shall not be reproduced except in full without approval of the Region 4 laboratory. These analyses were performed in accordance with the Laboratory Services Branch's Laboratory Operations and Quality Assurance Manual (LSB LOQAM) found at www.epa.gov/region4/sesd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the LSB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Chapter 5 of the LSB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Sample Disposal Policy

Due to limited space for long term sample storage, LSB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at R4SampleCustody@epa.gov.

DATA QUALIFIER DEFINITIONS

- U The analyte was not detected at or above the reporting limit.
- B-2 Reporting level elevated due to trace amounts of analyte present in the method blank.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- QC-4 Result greater than the highest point on the calibration curve
- QI-1 Internal standard was outside of method control limits.
- QL-1 Laboratory Control Spike Recovery less than method control limits
- QL-2 Laboratory Control Spike Recovery greater than method control limits
- QM-1 Matrix Spike Recovery less than method control limits
- QM-2 Matrix Spike Recovery greater than method control limits
- QM-3 Matrix Spike Precision outside method control limits
- QR-2 MRL verification recovery greater than upper control limits.

Notes and Definitions for QC Samples

- U The analyte was not detected at or above the reporting limit.
- B-3 Level in blank does not impact data quality
- B-4 Level in blank impacts MRLs.
- MRL-3 MRL verification for Soil matrix
- MRL-6 MRL verification for Waste matrix
- MRL-9 MRL verification for TCLP matrix
- QC-4 Result greater than the highest point on the calibration curve
- QL-1 Laboratory Control Spike Recovery less than method control limits
- QL-2 Laboratory Control Spike Recovery greater than method control limits
- QM-1 Matrix Spike Recovery less than method control limits
- QM-2 Matrix Spike Recovery greater than method control limits
- QM-3 Matrix Spike Precision outside method control limits
- QR-2 MRL verification recovery greater than upper control limits.
- XM-1 Sample background/spike ratio higher than method evaluation criteria

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 21-0164, Techtrix, Inc.

FROM: Floyd Wellborn
LSB Inorganic Chemistry Section Chief

THRU: Sandra Aker, Chief
Laboratory Services Branch

TO: Paula Whiting

Attached are the final results for the analytical groups listed below. This report shall not be reproduced except in full without approval of the Region 4 laboratory. These analyses were performed in accordance with the Laboratory Services Branch's Laboratory Operations and Quality Assurance Manual (LSB LOQAM) found at www.epa.gov/region4/sesd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the LSB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Chapter 5 of the LSB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Method Used:

Accreditations:

Classical/Nutrient Analyses (CNA)

Classical/Nutrients

EPA 9040 (Waste)

Sample Disposal Policy

Due to limited space for long term sample storage, LSB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at R4SampleCustody@epa.gov.

DATA QUALIFIER DEFINITIONS

- H-5 ASB-defined holding time exceeded.
pH-1 pH is equal to or less than reported result.

ACRONYMS AND ABBREVIATIONS

CAS	Chemical Abstracts Service
	Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
MDL	Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
MRL	Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
TIC	Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

ACCREDITATIONS:

ISO	Accredited to ISO/IEC 17025:2017 and accreditation requirements for Forensic Science Testing Laboratories. Refer to the certificate and scope of accreditation FT-0330 at: http://www.epa.gov/aboutepa/about-region-4s-science-and-ecosystem-support-division-sesd
NR	Not accredited for this test.
DW	Accredited for conformance with ISO/IEC 17025:2017 and testing elements in the Fifth Edition of the Manual for the Certification of Laboratories Analyzing Drinking Water, EPA 815-R-05-004, 2005. Refer to the certificate and scope of accreditation AT-2628 at: http://www.epa.gov/aboutepa/about-region-4s-science-and-ecosystem-support-division-sesd
ISO/DW	Accredited to ISO/IEC 17025:2017 and accreditation requirements for Forensic Science Testing Labs, and conformance with ISO/IEC 17025:2017 and testing elements in the Manual for the Certification of Laboratories Analyzing Drinking Water.
