## Data Validation Summary

Arcadis U.S., Inc. (Arcadis) performed a level III data validation evaluation of the analytical data collected during the Precision National Plating site investigation. The data evaluation was conducted in accordance with the United States Environmental Protection Agency's (USEPA) Data Validation Functional Guidelines for Evaluating Environmental Analyses, "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review," dated October 1999, and "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review," dated October 2004 ("the USEPA Guidance"). The following is a summary of the analytical data review for samples collected and analyzed from April through June 2023. The samples were submitted to TestAmerica Laboratories located in Edison, New Jersey for analysis. The TestAmerica sample delivery groups (SDGs) evaluated for this report include: 460-278383-1, 460-278459-1, 460-278459-2, 460-278503-1, 460-278609-1, 460-278684-1, 460-278684-2, 460-278685-1, 460-278806-1, 460-278886-1, 460-278886-2, 460-278976-1, 460-279076-1, 460-279077-1, 460-280121-1, and 460-282474-1.

The samples were analyzed using the following methods:

EPA Method 200.7 for metals

EPA Method 245.1 for mercury

EPA Method 7196A for hexavalent chromium

The data were evaluated based on the following parameters according to the USEPA Guidance for Level III data validation:

data completeness

holding times

blanks

duplicates and ICP serial dilution

matrix spike/matrix spike duplicate/post-digestion spike recoveries (MS/MSD/PDS)

laboratory control spike/laboratory control spike duplicate recoveries (LCS/LCSD)

A review of the laboratory reports revealed no issues which caused the data to be qualified in addition to the laboratory qualifiers. The sample temperature, hold times, calibrations, spike samples, laboratory control samples, duplicates, serial dilutions, and all other laboratory blanks were all within compliance criteria for all samples.

The following items were noted during the data review:

Several samples were put on hold and then activated for analysis later and some metals samples were filtered by the laboratory based on Precision's request. There were no issues identified during the analyses.

The laboratory indicated the percent recovery of sodium in the matrix spike was greater than the acceptance criteria (140%) in metals analysis batch 460-916834 which included samples from PNP SDG 460-282474-1. The recovery of sodium was low in the post-digestion spike analyzed in the batch. All other QA/QC parameters were in compliance. The concentration of sodium in the sample utilized for the matrix spike analysis (not a PNP sample) was greater than four times the spike concentration, so the percent recovery criteria does not apply. Therefore, the sodium results are not qualified,

The laboratory indicated the percent recovery of chromium was higher than the acceptance criteria in the matrix spike sample analyzed in batch 460-907307, which included samples from PNP SDG 460-278976-1. The percent recovery was calculated as 223% for PNP sample IP-10 (460-278976-15). The concentration of chromium in the sample was greater than four times the spike concentration. Additional matrix spikes, performed on PNP sample Res-2 (460-278976-7) and another sample not from PNP

## Data Validation Summary

resulted in acceptable recoveries of chromium. All other QA/QC parameters were in compliance. Therefore, the chromium results are not qualified based on the matrix spike recovery.

### **Summary of Quality Assurance/Quality Control Evaluation of Data**

Based upon the QA/QC review, the project data are valid and available for use in site characterization without qualification.
